1. Introduction

1.1 Purpose

The main objective of these SRS is to provide a base for the foundation of the project – “D Labour Chowk”. It gives the comprehensive view of the system that how it’s supposed to work as expected by end user. Customer requirements are analyzed to produce unambiguous functional and non-functional requirement so the development team get a clear idea and understanding to build user desired system.

This SRS is not only for the clear understanding of project but also for future teams . So, that they can understand how project was started. SRS also helps the upcoming developers to assist in maintaining and modifying the project as per user requirement.

1.2 Reading Suggestion:

These SRS document is intended for the current / future developer, project Manager’s, tester’s, and document writer’s so that they can easily understand the project for more improvement and modification for end user.

1.3 Document Conventions:

SRS	Software Requirement Specialization
DLC	D Labour Chowk

1.4 Scope of the Project:

The DLC is intended for fulfilling the need of contractor's, Common man and also giving daily employment to labours/workers.

DLC will have two end user labour/worker and customer.

This project will consist of making work profile for labours and post about the work by customer and contractor although we'll also provide skill improvement videos and report option if any inconvenience occurs with labour's. We'll also create easy to use user interface.

The main goal of DLC is to provide opportunities to the skilled labour/worker and also for the common man so that they can find skilled labour/worker and get satisfactory results.

2. Overall Description

2.1 Product Perspective

The platform is a web-based application designed to connect three main stakeholders: labourers, contractors, and users (clients who need labour services). The system will facilitate:

- Labourers posting their availability and applying for jobs.
- Contractors posting job opportunities and managing labourer applications.
- Users seeking labour services can browse available labourers, post their own job requests, and interact with contractors and labourers to fulfill their needs.

2.2 Product Functions

- **Labourer Profile Management:** Labourers can create and manage their profiles, including their skills, availability, and contact details.
- **Contractor Profile Management:** Contractors can create profiles, post job opportunities, and review applications from labourers.
- **User Profile Management:** Users can create profiles to post job requests, view available labourers, and interact with both labourers and contractors.
- **Job Posting and Search:** Contractors and users can post job opportunities. Labourers can search and apply for these jobs. Users can browse labourer profiles and job postings.
- **Application Management:** Labourers can apply for jobs, and contractors and users can review and manage these applications.
- **Messaging and Notifications:** The system will facilitate communication between labourers, contractors, and users through a messaging system and send notifications about job postings, applications, and messages.
- **Review and Rating System:** Users, contractors, and labourers can rate and review each other to build credibility and trust within the platform.
- **Endorsements and Skill Validations:** Allow contractors and users to endorse specific skills of labourers.

- **Networking and Connections:** Enable labourers, contractors, and users to connect and build a network, sending connection requests and following each other.
- **Job Recommendations and Alerts:** Implement a recommendation system that suggests jobs to labourers based on their profiles and past activities, and provide alerts for new job postings.
- **Portfolio and Project Showcase:** Allow labourers to upload photos and descriptions of their past work.

2.3 User Classes and Characteristics

- **Labourers**
 - **Characteristics:**
 - Individuals such as masons, workers, and hammals, also the worker who help in farm activity seeking work opportunities.
 - Typically have varying levels of literacy and technical skills.
 - Require simple, intuitive interfaces to manage their profiles and job applications.

- **Functions:**
 - Create and manage profiles with personal and professional details.
 - Post availability and apply for job opportunities.
 - Receive notifications about job postings and application statuses.
 - Communicate with contractors and users via messaging.
 - Build credibility through endorsements and skill validations.
- **Contractors**
 - **Characteristics:**
 - Individuals or companies looking to hire labourers for specific projects.
 - Likely to have higher technical and literacy skills compared to labourers.
 - Need tools to efficiently manage job postings and applications.

- **Functions:**
 - Create and manage profiles with company or personal details.
 - Post job opportunities and specify requirements.
 - Review applications from labourers and communicate with them.
 - Endorse skills of labourers and provide ratings and reviews.
 - Network with other contractors and labourers.
- **Users (Clients)**
 - **Characteristics:**
 - Individuals or organizations requiring labour services for various tasks.
 - May vary in technical skills, necessitating a user-friendly interface.
 - Need to browse labourer profiles and post specific job requests.
 - **Functions:**
 - Create and manage profiles to post job requests.
 - View and interact with labourer profiles and job postings.

- Communicate with both labourers and contractors to coordinate tasks.
- Provide endorsements, ratings, and reviews for labourers and contractors.
- Receive job recommendations and alerts based on their requirements.

2.4 Operating Environment

The application will be accessible via standard web browsers on desktops, laptops, tablets, and smartphones. It will require a stable internet connection to function.

2.5 Design and Implementation Constraints

- The system must comply with web standards and accessibility guidelines to ensure usability across different devices and for users with disabilities.

3. Specific Requirement

3.1 External Interface Requirements

3.1.1 User Interfaces

Mobile Application Interface: The app will have a user-friendly interface compatible with Android and iOS devices.

- **Web Portal:** A responsive web interface for desktop users.

- **Admin Dashboard:** An interface for administrators to manage and monitor the platform.

3.1.2 Hardware Interfaces

- Smartphones: Android (version 8.0 and above) and iOS (version 12.0 and above) devices.
- Web Browsers: Latest versions of Chrome, Firefox, Safari, and Edge.

3.1.3 Software Interfaces

- Operating Systems: Android, iOS, Windows, macOS.
- APIs: Integration with payment gateways (e.g., Stripe, PayPal), Google Maps for location services, and SMS services for notifications.
- Database: MySQL or PostgreSQL for data storage.

3.1.4 Communication Interfaces

- Internet Connectivity: Required for accessing the platform and services.
- Notifications: Push notifications for mobile apps, email notifications for updates and alerts.

3.2 Functional Requirements

3.2.1 User Registration and Authentication

- Workers and Employers: Separate registration processes for workers and employers.
- Authentication: Secure login using email/phone number and password, with options for social media login (Google, Facebook).

3.2.2 Job Posting and Search

- Employers: Can post job requirements specifying skills, duration, location, and payment details.
- Workers: Can search for jobs based on skills, location, and availability.

3.2.3 Hiring

- Manual Hiring: Employers can manually browse profiles and hire workers.

3.2.4 Job Management

- Status Updates: Track job progress with status updates from workers and employers.
- Feedback System: Rating and review system for both workers and employers.

3.2.5 Payment System

- Payment Processing: Secure payment handling through integrated gateways.
- Escrow Services: Hold payments in escrow until job completion.

3.3 Performance Requirements

- Scalability: The system should handle up to 1,000 simultaneous users.
- Response Time: Average response time for any user action should be less than 2 seconds.
- Availability: The system should have an uptime of 99.9%.

3.4. Design Constraints

- Platform Compatibility: The app must be compatible with both Android and iOS platforms.
- Security: Implement robust security measures including data encryption, secure APIs, and regular security audits.
- Localization: Support for multiple languages based on the region.

3.5. Logical Database Requirements

- User Data: Store user profiles, registration details, and authentication credentials.
- Job Listings: Information about job posts, including descriptions, requirements, and employer details.
- Transaction Records: Payment details, escrow records, and transaction histories.
- Feedback and Ratings: Ratings and reviews for workers and employers.

3.6. Software System Attributes

3.6.1 Security

- Data Encryption: Use SSL/TLS for data transmission and encryption for sensitive data in the database.
- Authentication and Authorization: Use OAuth for secure authentication and role-based access control.

3.6.2 Reliability

- Backup: Regular data backups with disaster recovery plans.
- Fault Tolerance: Redundant systems to ensure minimal downtime.

3.6.3 Maintainability

- Modular Design: Use a modular architecture for easy updates and maintenance.
- Documentation: Comprehensive documentation for developers and administrators.

3.6.4 Usability

- Intuitive UI: Design an easy-to-use interface for both technical and non-technical users.
- Accessibility: Ensure the platform is accessible to users with disabilities.

3.6.5 Portability

- Cross-Platform Support: Ensure the application can run on various devices and operating systems without modification.

4. Other Non-functional Requirements

4.1 Performance Requirements

The web application must be highly responsive and capable of handling high traffic loads efficiently. The system should support at least 500 concurrent users without performance degradation. Page load times must not exceed 3 seconds for 95% of user interactions.

The database should handle up to 1,000 transactions per minute to support booking and contract management. The rationale behind these requirements is to ensure a smooth and seamless user experience, minimizing wait times and ensuring that users can quickly find and book contractors or labourers.

These performance metrics are critical during peak usage times, such as mornings and late afternoons when users are more likely to access the platform.

4.2 Safety Requirements

The system must incorporate safety mechanisms to prevent data loss and ensure data integrity. Regular backups must be scheduled, with incremental backups every hour and full backups daily. The platform must comply with relevant health and safety regulations when dealing with contractor and labourer details, ensuring no sensitive personal information is exposed unnecessarily.

4.3 Security Requirements

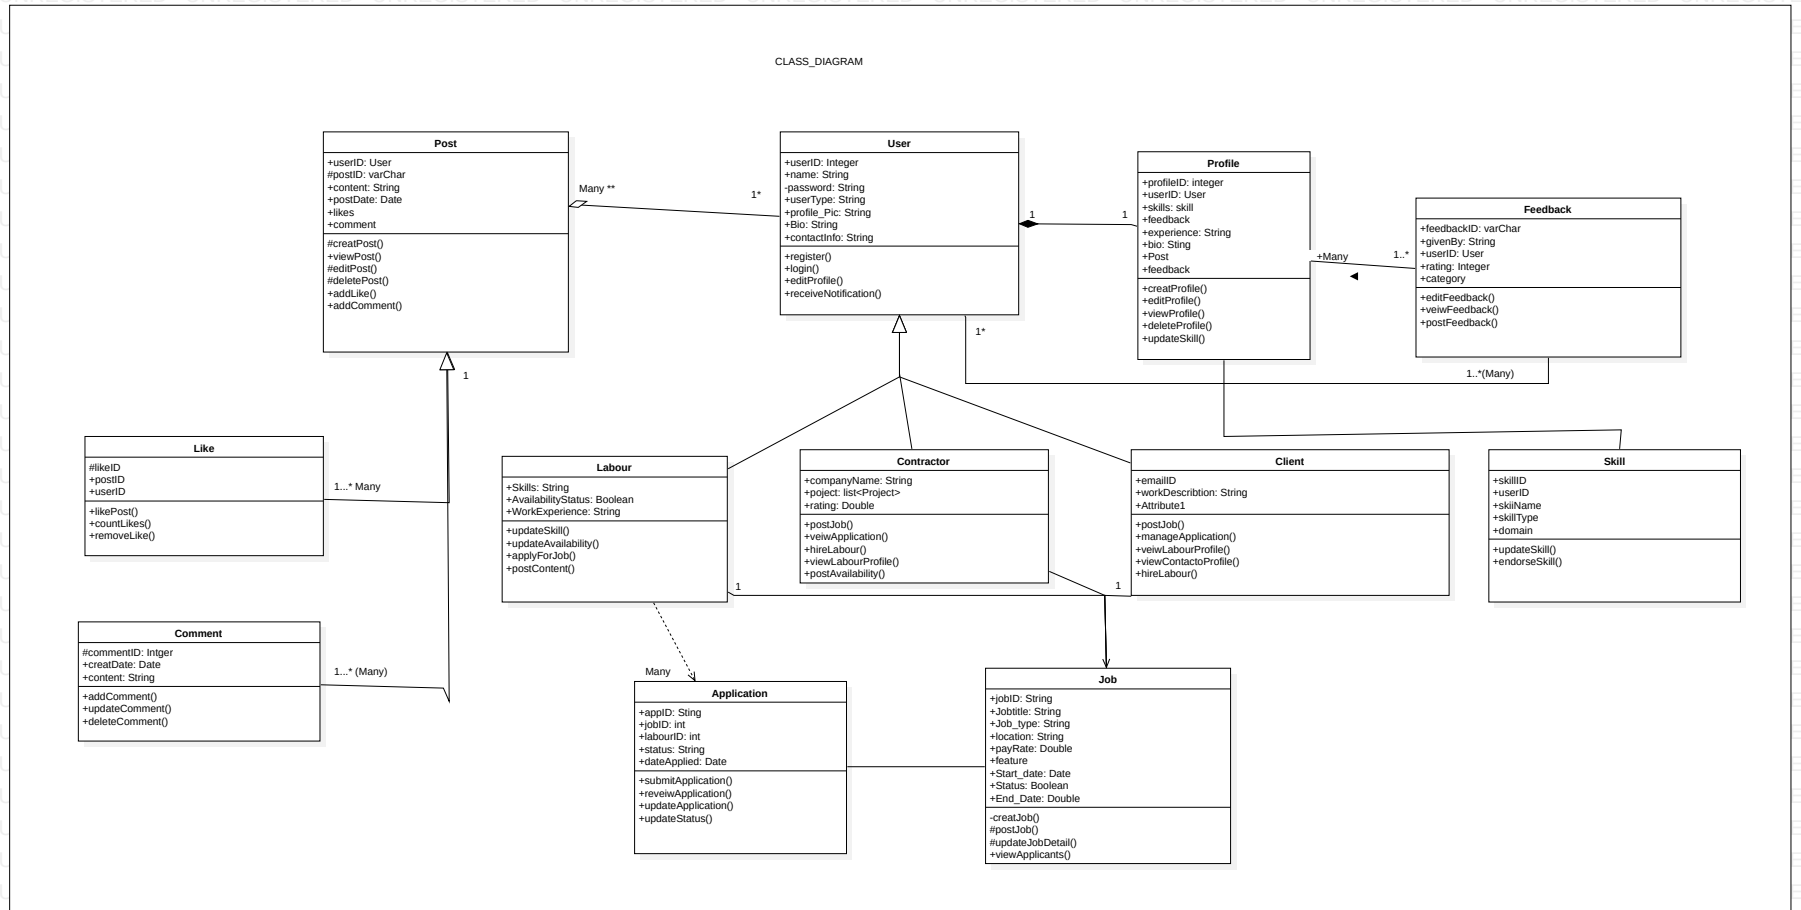

User identity authentication is mandatory, utilizing multi-factor authentication (MFA) to ensure secure access. All user data must be encrypted both in transit (using TLS 1.2 or higher) and at rest (using AES-256 encryption). Access control policies must be enforced, ensuring only authorized users can view or modify sensitive information.

4.4 Software Quality Attributes

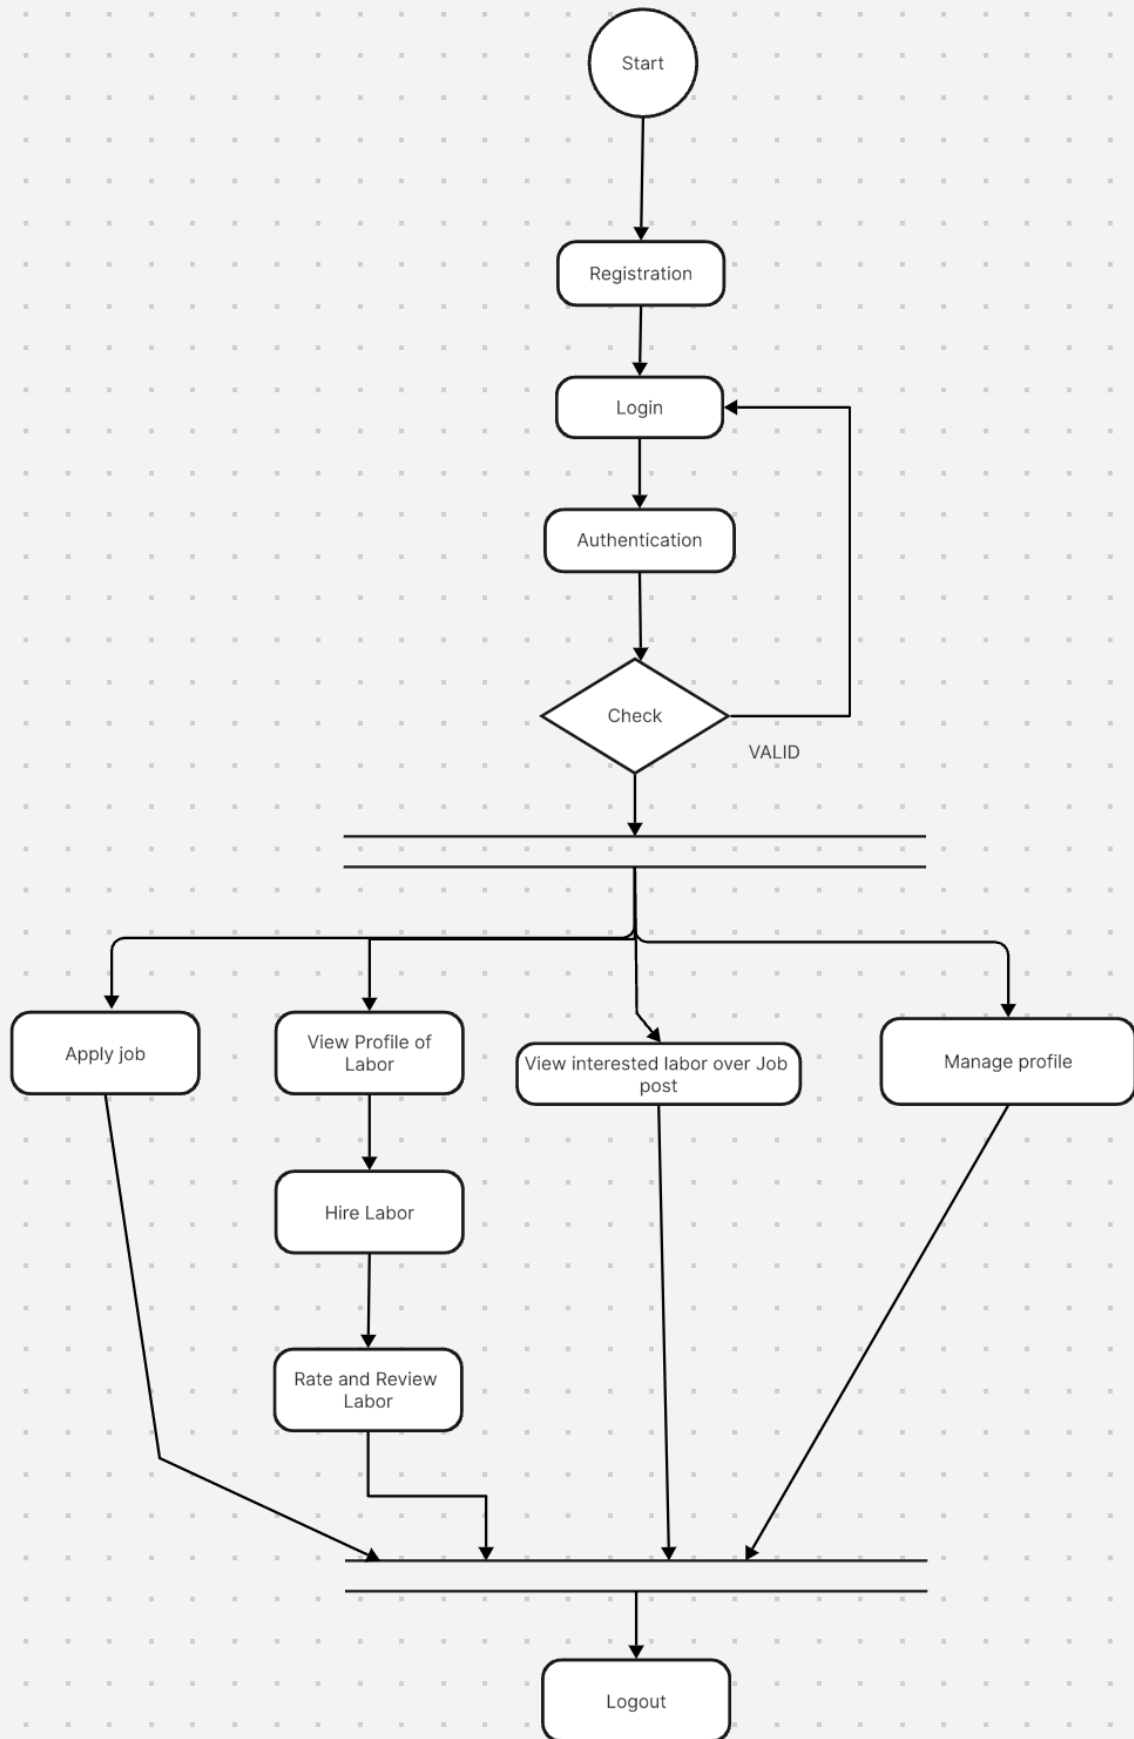

- **Adaptability:** The system should be easily configurable to adapt to different regions and languages, supporting at least three languages at launch.
- **Correctness:** The application must correctly perform all operations as specified, with an error rate of less than 0.1%.
- **Flexibility:** The system should be designed to allow easy addition of new features or modification of existing ones with minimal disruption.
- **Interoperability:** The application should be able to seamlessly integrate with third-party services such as payment gateways, mapping services, and SMS gateways.
- **Maintainability:** The codebase should be modular, well-documented, and follow best practices to ensure ease of maintenance and updates.
- **Portability:** The system should be platform-independent, running smoothly on various operating systems and devices, including desktops, tablets, and smartphones.
- **Reliability:** The platform should function reliably under all expected conditions, with a mean time to failure (MTTF) of at least one year.
- **Reusability:** Components of the system should be designed with reusability in mind to facilitate use in future projects.
- **Robustness:** The system must handle unexpected conditions gracefully, ensuring no data corruption or loss of service.
- **Testability:** The system should be designed to facilitate automated testing, with at least 80% code coverage.
- **Usability:** The user interface should be intuitive and user-friendly, with a satisfaction rate of at least 90% based on user surveys.

4.5 Business Rules

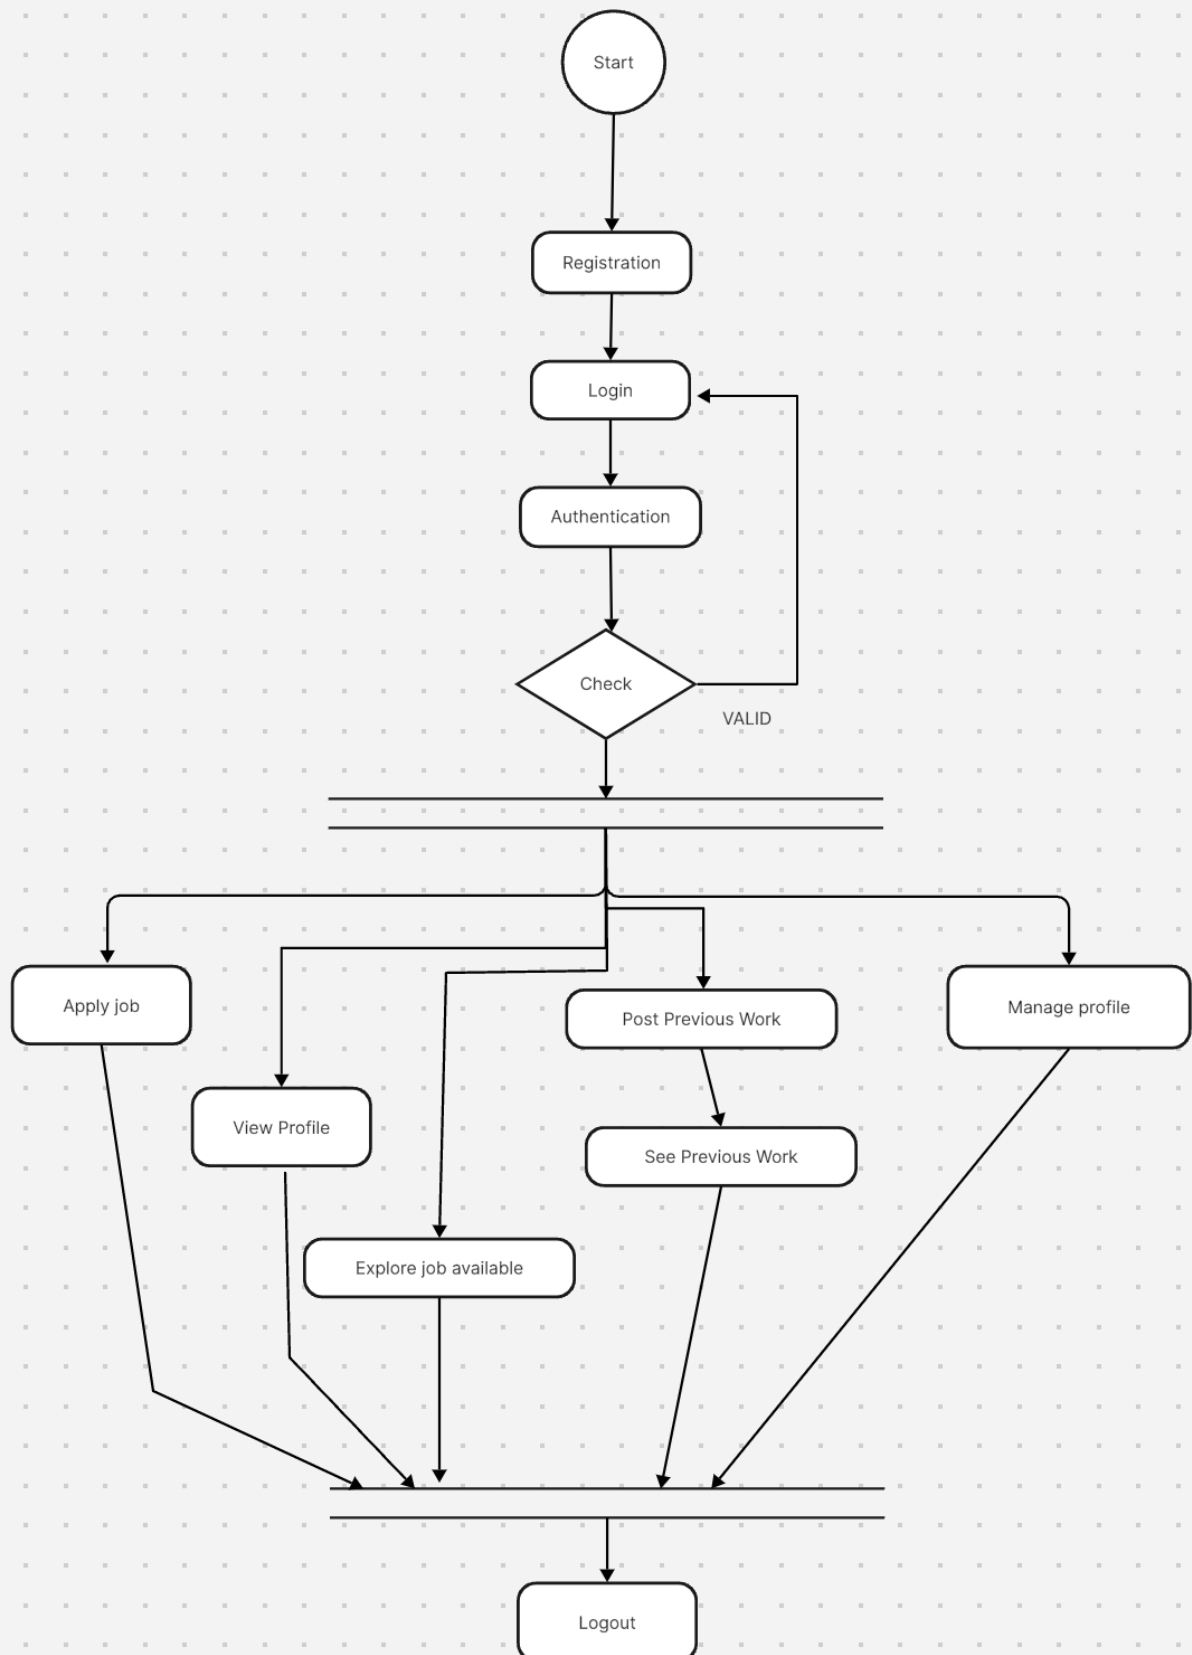

- Only registered users can book contractors or hire labourers.
- Contractors must verify their credentials before they can be listed on the platform.
- Users can rate and review contractors, and these ratings must be visible to other users.
- Payments must be processed securely, and financial transactions must comply with relevant regulations.
- Contractors can set their availability and service areas, and users can book only within those parameters.
- Admins can perform actions such as user verification, handling disputes, and managing platform content.

Team:	
Sprint:	DLR Sprint 1
Story point estimate:	6

Description

User Registration

- As a user I want to register on the platform So that I can create my profile and access the system features
- After registration I can explore various feature of platform.

Scope:

- Implement the user registration feature to allow new users to create an account.
- Include form validation, error handling, and email confirmation functionalities.

Prerequisites:

1. The platform must have a functional homepage with a prominently displayed "Sign Up" button.
2. The backend system must be configured to handle registration requests and validate user input.
3. Email services must be set up to send verification emails to users.

Precondition

- As a labor (User type)
- For registration, labor must have an active mobile number.
- If possible Email ID also needed .
- To access web portal, a active internet is required.

Acceptance Criteria:

1. Access Registration Page:
 - **Given** the user is on the platform's home page,
 - **When** they choose to register a new account,
 - **Then** they should be directed to the user registration page.
2. Enter Personal Details:
 - **Given** the user is on the registration page,
 - **When** they input their personal details into the registration form,
 - **Then** they should be able to enter required information such as full name, email address, phone number, and password.
3. Email Address Validation:
 - **Given** the user has entered an email address,
 - **When** they submit the registration form,
 - **Then** the system should validate that the email address is in a proper format and not already in use by another account.
4. Password Requirements:
 - **Given** the user is setting a password,
 - **When** they enter a password,
 - **Then** the system should enforce password complexity requirements (e.g., minimum length, inclusion of numbers and special characters) and provide feedback if the password does not meet these requirements.

5. Successful Registration Confirmation:

- **Given** the user has successfully completed the registration process,
- **When** their account is activated,
- **Then** the system should display a confirmation message and direct them to a login page or dashboard.

Sprint:	DLR Sprint 2
Story point estimate:	5

Description

As a customer I was able to post a job of more than 2 days or when I required more than two labors for the work.

Description:

The contractor publishes a job posting to recruit skilled, semiskilled, and non-skilled laborer for both small scale and large-scale project or manufacturing. After publishing labor can view the job posting or apply for it.

Precondition:

- The employer must have an active account on the job management app.
- The employer must be logged into the app to post a new job opportunity.

Scope:

- Implementation of a job posting form for employers.
- Validation of job posting details to ensure accuracy and completeness.
- Integration with job listing and search functionalities to make new job opportunities visible to laborers.

Prerequisite:

- The app must have a job posting form with fields for job details.
- The app must have a validation system to check the accuracy and completeness of job postings.
- The app must be integrated with the job listing and search features to display new job opportunities to users.

Acceptance Criteria:

1. Form Accessibility:

- **Given** the user is logged in and on the dashboard,
- **When** they navigate to the job posting section,
- **Then** they should be able to access the job posting form.

2. Form Fields:

- **Given** the user is on the job posting form,
- **When** they view the form,
- **Then** they should fill the form to post information regarding their project/work.

3. Submission:

- **Given** the user has successfully entered all the data and submit it.
- **When** the submission is processed,
- **Then** after submission a Job post is created and the data is stored in the database.

4. Confirmation:

- **Given** the job posting has been successfully submitted,
- **When** the process is complete,
- **Then** the user should receive a confirmation message on Screen

5. Editing and Deleting:

- **Given** the user is on their job management dashboard,
- **When** they select a job posting,
- **Then** they should have the options to edit or delete the posting.

6. Search and Filter:

- **Given** the job posting is live,
- **When** candidates search or filter job listings,
- **Then** the posted job should be visible and appear according to the search and filter criteria (e.g., job title, location).

Description

Laborer Past Work Posting Feature

As a laborer,

I want to post my past work experience with details such as project type, duration, and photos of the work,

So that contractors and potential employers can evaluate my skills and experience for future job opportunities.

Precondition:

- The laborer must have an active account on the platform and be logged in to post past work.
- The platform should have a section dedicated to laborers for managing their profiles, including previous work experience.

Prerequisite:

- The laborer's profile must be set up with basic details such as name, occupation, and contact information before posting past work.
- The platform should support image uploads and allow for storage of media files (e.g., photos of the work).

Scope:

- The feature will allow laborers to create posts detailing their past projects, which will include fields such as title, type of project, duration, and description.
- Uploaded photos will showcase the work visually and add credibility to the laborer's portfolio.
- This feature is available to laborers and viewable by contractors, potential employers, and users interested in hiring laborers for similar work.

Acceptance Criteria:

1. Post Creation:

- Laborers can create a post to showcase their past work.
- The post form should include fields for:
 - Project Title
 - Project Type (e.g., masonry, carpentry, electrical)
 - Duration (start and end date)
 - Description of the work done
 - Upload feature for attaching photos (optional but preferred)
- Laborers should be able to specify their role in the project and mention any collaborators if applicable.

2.

Job Posting and Search (DLR-2)

[DLR-9] Customer search for Labor Created: 30/Jul/24 Updated: 24/Sep/24 Resolved: 16/Sep/24

Status:	Done
Project:	D Labour Rocks
Components:	None
Affects versions:	None
Fix versions:	None
Parent:	Job Posting and Search

Type:	Story	Priority:	Medium
Reporter:	DEV__raj PARMAR	Assignee:	DEV__raj PARMAR

Time Spent:	Not Specified		
Original estimate:	Not Specified		

Rank:	0 i000dn:
Sprint:	DLR Sprint 3
Story point estimate:	5

Description

As a customer I want to search for the labor as per the skill i needed, location, price, time

Description:

Clients search for labor who possess the necessary skills and qualification to fulfill their particular work requirements and demand.

Precondition:

- The customer must be logged into the app to access the labor search functionality.
- The app must have a database of laborers with profiles containing relevant information such as skills, experience, and location.

Scope:

- Implementation of a search feature that allows customers to specify criteria for finding laborers.
- Integration of filters and sorting options to refine search results.
- Display of laborer profiles with relevant details based on search criteria.

Prerequisite:

- The app must have a search algorithm that can query the laborer database based on various criteria.
- The app should provide a user-friendly interface for entering search criteria and viewing results.

Acceptance Criteria:

1. Accessing the Search Feature:

- **Given** the customer is logged into their account,
- **When** they navigate to the search page or use the search bar,
- **Then** they should see a search interface with input fields and filter options.

2. Performing a Search:

- **Given** the customer is on the search page,
- **When** they enter search keywords or select filters (e.g., skills, location, ratings),
- **Then** the system should display a list of labor or service providers that match the search criteria.

3. Filtering Search Results:

- **Given** the customer has performed a search,
- **When** they apply filters (e.g., by skill, location, rating, availability),
- **Then** the search results should update to reflect the applied filters, showing only the labor or service providers that meet the criteria.

4. Search Accuracy:

- **Given** the customer enters specific search criteria,
- **When** the search is executed,
- **Then** the search results should accurately reflect the entered criteria and match the relevant labor or service providers.

User Registration and Profile Management (DLR-1)

 [DLR-10] Create profile Created: 30/Jul/24 Updated: 24/Sep/24 Resolved: 03/Sep/24

Description

To Create Profile

- As a registered user
- I want to create profile and manage my profile
- So that I can provide my details and showcase my skills/requirements.

Precondition

- User should be registered over the web platfor.

Prerequisites:

1. The user must be logged in .
2. The backend system should be set up to handle profile creation and updates.
3. The database must be configured to store user profile information securely.

• Acceptance Criteria:

- The user can access the profile creation page.
- The user can enter details (skills, experience, contact information(specially mobile number).
- The system saves the profile information.

Acceptance Criteria:

1. Accessing the Profile Creation Form:

- **Given** the user is logged into their account,
- **When** they navigate to the account settings or Home Page,
- **Then** they should see an option to create or edit their profile, which redirects them to the profile creation form.

2. Form Fields:

- **Given** the user is on the profile creation form,
- **When** they view the form,
- **Then** the form should include Create Profile credentials.

3. Form Validation:

- **Given** the user is filling out the profile creation form,
- **When** they submit the form,
- **Then** the form should validate the required fields.

4. Successful Profile Creation:

- **Given** the user has entered valid information and there are no validation errors,
- **When** they submit the profile creation form,
- **Then** their profile should be created or updated successfully, and they should be redirected to their profile page with a confirmation message.

5. Security:

- **Given** the user's profile data is being stored,
- **When** the data is saved,
- **Then** it should be securely stored and protected against unauthorized access.

Sprint:	DLR Sprint 3

Description

As a user, I want to edit my profile so that I can update my personal information and preferences.

scope

Users should be able to modify their profile details including bio, contact information, and skills.

Pre-condition

- User must be logged in
- Existing profile data must be retrievable and editable.

Prerequisites:

1. The user must be logged in to access the profile editing feature.
2. The Database should able to update the profile changes.
3. The frontend must include an editable profile form with necessary fields and validation.

Acceptance Criteria:

1. Accessing the Edit Profile Form:
 - **Given** the user is logged into their account,
 - **When** they navigate to their view profile section
 - **Then** they should see an option to edit their profile, which directs them to the profile editing form.
2. Form Fields:
 - **Given** the user is on the profile editing form,
 - **When** they view the form,
 - **Then** the form should include all the field that are included in create profile
3. Form Validation:
 - **Given** the user is filling out the profile editing form,
 - **When** they attempt to submit the form,
 - **Then** the form should validate that all required fields (e.g., Full Name, Email Address) are filled out correctly
4. Saving Changes:
 - **Given** the user has reviewed the profile changes,
 - **When** they click the "Save" or "Update" button,
 - **Then** the changes should be saved successfully, and the user should receive a confirmation message.
5. Profile Update Visibility:
 - **Given** the user's profile has been updated,
 - **When** other users view the profile,
 - **Then** they should see the updated information as reflected in the profile.

Job Posting and Search (DLR-2)

 [DLR-12] Labor search for work Created: 30/Jul/24 Updated: 16/Sep/24 Resolved: 16/Sep/24

Status:	Done

Story point estimate:	5

Description

As a laborer,
I want to be able to search for available job opportunities based on specific criteria,
so that I can find suitable work that matches my skills, location, and availability.

Scope

- **Search Functionality:** Laborers can enter various criteria to search for job opportunities, including job type, location, and required skills.
- **Search Results:** The system will display a list of job opportunities that match the search criteria, along with details for each job.
- **Filters and Sorting:** Laborers can apply filters and sort job listings based on different parameters to narrow down their search results.

Preconditions

1. **User Authentication:** The laborer must be logged in to access the job search functionality.
2. **Job Database:** The system must have an up-to-date database of job postings with details including job type, location, required skills, and other relevant criteria.
3. **Search Interface:** A user-friendly interface for entering search criteria and viewing job opportunities must be available.

Prerequisites

1. **Job Posting Data:** Job postings must be accurately entered into the system with relevant details such as job type, location, required skills, and availability.
2. **Search Criteria Configuration:** The search criteria parameters (such as job type, skill requirements, and location) need to be set up and integrated into the search functionality.
3. **Search Algorithm:** An effective search algorithm must be implemented to query the job database and return relevant job opportunities based on the laborer's criteria.

Acceptance Criteria:

1. **Accessing the Search Feature:**
 - **Given** the labor is logged into their account,
 - **When** they navigate to the job search page or use the search bar,
 - **Then** they should see a search interface with input fields and filter options.
2. **Performing a Search:**
 - **Given** the labor is on the search page,
 - **When** they enter search keywords or select filters (e.g., job title, location, skill requirements),
 - **Then** the system should display a list of job opportunities or projects that match the search criteria.
3. **Filtering Search Results:**

- **Given** the labor has performed a search,
- **When** they apply filters (e.g., by job type, location, salary range, date posted),
- **Then** the search results should update to reflect the applied filters, showing only the job opportunities

4. Viewing Job Details:

- **Given** the labor has found a job opportunity or project in the search results,
- **When** they click on a job listing or project link,
- **Then** they should be redirected to the detailed job or project page.

5. Search Accuracy:

- **Given** the labor enters specific search criteria,
- **When** the search is executed,
- **Then** the search results should accurately reflect the entered criteria and match the relevant job opportunities or projects.

Sprint:	DLR Sprint 2
Story point estimate:	4

Description

As a user, I want to delete my profile so that I can remove my information from the platform permanently

Scope

- Users should be able to request profile deletion and confirm their intent.

Pre-requisite

- User must be logged in.
- Profile deletion functionality is integrated and operational.
- The database must be configured to securely delete user profile information.

Acceptance Criteria:

1. Accessing the Delete Profile Option:
 - Given** the user is logged into their account,
 - When** they navigate to the account settings or profile management page,
 - Then** they should see an option to delete their profile.
2. Initiating Profile Deletion:
 - Given** the user clicks the delete profile option,
 - When** the user selects this option,
 - Then** they should be presented with a confirmation dialog asking if they are sure they want to permanently delete their profile.
3. Confirmation of Deletion:
 - Given** the user is in the confirmation dialog,
 - When** they confirm the deletion by clicking a confirmation button (e.g., "Yes, Delete" or "Confirm"),
 - Then** their profile should be scheduled for deletion, and they should receive a confirmation message indicating that their request is being processed.
4. Security:
 - Given** the profile and data are being deleted,
 - When** the data is removed,
 - Then** it should be securely deleted to ensure that it cannot be recovered and permanently deleted form database.

Exceptional Criteria:

1. User Authentication Failure:
2. Data Retention Policy
3. Technical Issues
4. Profile Deletion Request Expiry

Job Posting and Search (DLR-2)

 [DLR-14] Customer can view profile of Labor and hire them Created: 05/Aug/24 Updated: 24/Sep/24 Resolved: 24/Sep/24

Description

As a client I want to view profile of the labor so that based on his past interaction and work i can hire him from his profile for the work to be done

Description:

The client can view profile through his post and his detail so that based on his work and past interaction client can select him and contact him.

Precondition:

- The customer (employer) must have an active account on the job management app.
- The laborer must have an active profile on the app and be available for contact.
- Both parties must be logged into the app to initiate and receive messages.

Prerequisite:

Acceptance Criteria:

1. Accessing the Contact Feature:

- **Given** the customer is logged into their account,
- **When** they navigate to a labor profile page.
- **Then** they should see an option to view Profile and hire him and this info can send to labour .

Review and Rating (DLR-7)

 [\[DLR-15\] Review and Rating Labor based on Work](#) Created: 05/Aug/24 Updated: 09/Oct/24 Resolved: 09/Oct/24

Description

Description:

As a Client, I want to review the profiles and performance of laborers who have completed work for me.

Scope:

This user story covers the functionality for Client to review on laborers who have completed tasks or projects.

Precondition:

- The Client must be logged into their account.
- The laborer must have completed a job or project that is ready for review.

Prerequisite:

- The review system must be integrated with laborer profiles and completed job records.

Acceptance Criteria:

1. Access Review Form:

- **Given** the Client is logged into their account and a job or project is completed,
- **When** they navigate to the completed job or project details,
- **Then** they should see an option to review the laborer associated with that job or project.

2. Provide Feedback:

- **Given** the Client is on the review form page,
- **When** they enter textual feedback about the laborer's performance,
- **Then** the feedback should be submitted along with the rating and be visible to the laborer.

3. Review History:

- **Given** the Client has submitted reviews,
- **When** they access their review history,
- **Then** they should be able to view a list of all reviews they have submitted, including the laborer's name, job details, rating, and feedback provided.

4. Edit or Delete Reviews:

- **Given** the Client has submitted a review,
- **When** they decide to edit or delete a review,
- **Then** they should be able to do so, and the system should update or remove the review accordingly, with changes reflected in the laborer's profile.

Review and Rating (DLR-7)

[DLR-16] Rate the labor work Created: 05/Aug/24 Updated: 09/Oct/24 Resolved: 09/Oct/24

Description

As a user, I want to report any issues or inappropriate behavior from the labor so that necessary actions can be taken.

Precondition:

- The Client must be logged into their account.
- The laborer must have completed or been involved in a job or project that is the subject of the report.

Scope

- Users can submit reports about labor behavior or performance.

Prerequisite

- User must have interacted with the labor.
- Reporting system is implemented and monitored.

Acceptance Criteria:

1. Access Report Form:

- **Given** the Client is logged into their account and a job or project with the laborer is completed,
- **When** they navigate to the job or project details,
- **Then** they should see an option to report the laborer.

2. Select Report Reason:

- **Given** the Client is on the report form page,
- **When** they are prompted to select a reason for reporting,
- **Then** they should be able to choose from predefined reasons .

3. Provide Report Details:

- **Given** the Client has selected a reason for reporting,
- **When** they are prompted to provide additional details,
- **Then** they should be able to enter a detailed description of the issue, including specific incidents or evidence.

4. Submit Report:

- **Given** the Client has completed the report form,
- **When** they submit the report,
- **Then** the system should record the report, provide a confirmation message.

Description

As a laborer using the job management app,
I want to receive notifications when I am hired for a job and for other labor-related updates,
So that I can stay informed about job opportunities, changes, and updates relevant to my work.

Description: This user story outlines the functionality for laborers to receive notifications regarding new job hires and other labor-related updates through the job management app.

Precondition:

- The laborer must have an active account on the job management app.
- The laborer must have enabled notifications within the app's settings.
- The laborer must be logged into the app and have a stable internet connection.

Scope:

- Implementation of notification features for new job hires.
- Implementation of notifications for job updates and payment updates.
- Customization options for notification preferences.

Prerequisite:

- The app must be properly integrated with notification services (e.g., push notifications, email notifications).
- The app must have functionality to handle job hiring, updates, and payment processes.

Acceptance Criteria:

1. In-App Notifications:

- **Given** the user is logged into the platform,
- **When** a notification occurs for certain events
- **Then** the user should receive an in-app notification that appears in the notification center or a designated area of the interface.

2. Email Notifications:

- **Given** the user has enabled email notifications for certain events,
- **When** a relevant event occurs
- **Then** the user should receive an email containing details about the event and a link to take further action if applicable.

3. SMS Notifications:

- **Given** the user has opted to receive SMS notifications and provided a valid phone number,
- **When** a relevant event occurs
- **Then** the user should receive an SMS message with a brief summary of the event.

4. Notification Content:

- **Given** a notification is generated for an event,
- **When** the user receives the notification,
- **Then** the content of the notification should include relevant details about the event (e.g., sender's name for messages, application status for job postings)

Exceptional Criteria:

1. Notification Failure
2. Notification Overload
3. Privacy Concerns
4. Access Issues

Description

As a labor I want a secure job and regular work

Description: This user story describes the functionality where laborers receive personalized job recommendations based on their skills, preferences, and past job history.

Precondition:

- The laborer must have an active account on the job management app.
- The laborer must have completed their profile with relevant skills, experience, and preferences.
- The app must have access to a job database with job postings and laborer profiles.

Scope:

- Implementation of a recommendation engine that suggests jobs based on laborer profiles and preferences.
- Display of personalized job recommendations within the app.
- Mechanism for laborers to provide feedback on job recommendations.
- Integration with laborer profiles to ensure recommendations are relevant.

Prerequisite:

- The app must have a recommendation algorithm capable of analyzing laborer profiles and job postings.
- The laborer's profile must be populated with accurate and up-to-date information.
- The job database must be regularly updated with new job postings.

Acceptance Criteria:

1. Personalized Recommendations:

- **Given** the user is logged into their account,
- **When** they navigate to the job recommendations section,
- **Then** they should see a list of job recommendations personalized based on their profile information (e.g., skills, experience).

2. Recommendation Updates:

- **Given** the user updates their profile or job preferences,
- **When** these changes are saved,
- **Then** the job recommendations should be refreshed and updated to reflect the new profile information and preferences.

3. Job Details Display:

- **Given** the user views a job recommendation,
- **When** they click on a recommended job,
- **Then** they should be able to see detailed information about the job

4. Relevant Job Alerts:

- **Given** the user has set up job alerts,
- **When** a job matching their alert criteria is posted,
- **Then** the user should receive an alert with the job recommendation details.

Exceptional Criteria:

1. No Suitable Jobs
2. Profile Inaccuracy
3. Technical Issues

Description

Description: As a client or laborer, I want to receive notifications when the status of a job application changes. Scope: This feature will enable both clients and laborers to receive notifications via email or within the application when there is a change in the status of a job application. Notifications will include details about the status change and any relevant information. Preconditions: 1. The user (client or laborer) must have an active account and be logged in. 2. The user must have at least one active job posting or job application. 3. The notification settings must be configured to allow notifications (if such settings exist). Prerequisite: A job application status must be updated (e.g., from "Applied" to "Under Review", "Accepted", or "Rejected"). Acceptance Criteria: 1. Both Client and Labor Receive Notification: Given the client or laborer has an active job posting or application When the status of their job application changes Then they should receive a notification indicating the new status of the application. 1. Navigate to desired page through Notification: Given the client or laborer receives a notification about a status update When they click on the notification link Then they should be directed to the relevant section of the platform

Description

As a Client, I want to be able to create a job post on the Website so that I can attract potential candidates and find skilled and reliable labor.

Preconditions:

1. The user must be logged into their account to access the job posting feature.
2. The job posting form should be integrated into the platform's user interface.
3. The job posting feature should be available at all times, except during scheduled maintenance or system updates.

Scope:

- Implement a job post creation feature that allows Client to enter and submit details about a job opening.
- Ensure the job post form includes fields for necessary job details and allows for previewing and submitting the post.

Prerequisites:

1. The employer must be logged in to access the job posting feature.
2. The database must be configured to store job postings and related information securely.
3. The frontend must include a job post creation form with necessary fields and validation.

Acceptance Criteria:

1. Accessing the Job Post Form:
 - **Given** the Client should be logged into their account,
 - **When** they navigate to the client dashboard or "Post a Job" section,
 - **Then** they should see an option to create a new job post, which directs them to the job post creation form.
2. Form Fields:
 - **Given** the client is on the job post creation form,
 - **When** they view the form,
 - **Then** the form should include Job Details.
3. Form Validation:
 - **Given** the Client is filling out the job post form,
 - **When** they attempt to submit the form,
 - **Then** the form should validate that all required fields are filled out correctly.
4. Submitting the Job Post:
 - **Given** the client has reviewed the job post preview,
 - **When** they click the "Submit" button,
 - **Then** the job post should be submitted successfully and saved in the Database, and the employer should receive a confirmation message.
5. Job Post Listing:
 - **Given** the job post has been submitted,
 - **When** the job post is live,
 - **Then** it should appear in the job listings section of the Website, visible to potential candidates and searchable according to the Website's search functionality.

Description

Description:

As a client, I want to be able to edit my existing job posts so that I can update the job details, requirements, or other relevant information.

Scope:

This feature will enable clients to modify details of their job posts, such as job title, description, requirements, budget, and application deadline.

Preconditions:

- 1. The client must have an active account and be logged in.
- 2. The client must have at least one active or draft job post.

Prerequisite:

- The job post must be in a state that allows editing.

Acceptance Criteria:

1. Accessing the Edit Interface

- **Given** the client is logged into their account and is on their job posting dashboard,
- **When** they select a job post they want to edit,
- **Then** they should be able to access an "Edit Job Post" interface with pre-filled details of the selected job post.

2. Editing Job Details

- **Given** the client is on the "Edit Job Post" page,
- **When** they update details such as the job title, description, requirements, budget, or application deadline,
- **Then** they should see their changes reflected in the form fields.

3. Saving Changes

- **Given** the client has made changes to the job post details,
- **When** they click the "Save" or "Update" button,
- **Then** the system should save the changes and provide a confirmation message that the job post has been updated successfully.

4. Reverting Changes

- **Given** the client is on the "Edit Job Post" page,
- **When** they decide to cancel the edits,
- **Then** they should be able to discard their changes and return to the previous state of the job post without saving the updates.

5. Notification of Changes

- **Given** the client has successfully updated their job post,
- **When** the changes are saved,
- **Then** the system should notify the client (e.g., via email or in-app message) that the job post has been updated.

Job Posting and Search (DLR-2)

Description

As an Client, I want to be able to delete a job post from the website so that I can remove any job listings that are no longer relevant or needed.

Preconditions:

- 1. The Client must be logged into their account and can have at least one job post.
- 2. The job post should be accessible from the Clients Dashboard.
- 3. The delete feature should be available at all times, except during scheduled maintenance or system updates.

Scope:

- Implement a feature that allows Clients to delete a specific job post.
- Ensure that the job post is removed from the Website and also from the database.
- Provide confirmation to the Client before the job post is permanently deleted.

Prerequisites:

- 1. The Client must be logged into their account and have the appropriate permissions to delete job posts.
- 2. The backend system must be configured to handle deletion requests.
- 3. The frontend must include a delete option in the job post management interface and a confirmation mechanism to prevent accidental deletions.

Acceptance Criteria:

- 1. Accessing the Delete Option:
 - **Given** the Client is logged into their account,
 - **When** they navigate to their job management section or job post list,
 - **Then** they should see an option to delete each of their job posts.
- 2. Initiating Deletion:
 - **Given** the Client is viewing a specific job post they want to delete,
 - **When** they click on the "Delete" button or link,
 - **Then** the system should prompt the Client with a confirmation dialog asking if they are sure they want to delete the job post.
- 3. Confirming Deletion:
 - **Given** the Client receives the confirmation dialog,
 - **When** they confirm the deletion (e.g., by clicking "Yes, Delete"),
 - **Then** the job post should be permanently removed from the platform, and the Client should receive a confirmation message
- 4. Canceling Deletion:
 - **Given** the Client receives the confirmation dialog,
 - **When** they choose not to delete the job post (e.g., by clicking "Cancel"),
 - **Then** the job post should remain in the system, and no changes should be made.
- 5. Updating Job Listings:
 - **Given** a job post has been deleted,
 - **When** other users view the job listings,
 - **Then** the deleted job post should no longer appear in the job listings or search results.

User Registration and Profile Management (DLR-1)

 [DLR-32] CreateLanding Page Created: 04/Sep/24 Updated: 09/Sep/24 Resolved: 08/Sep/24

Description

As a user, I want to see a well-designed and functional home page when I visit the platform so that I can easily navigate to key features and information.

Preconditions:

1. The home page should be designed and developed to integrate with the existing Website's style and functionality.
2. The home page should be available at all times, except during scheduled maintenance or system updates.
3. The home page should be the initial landing page of the platform that users see when they visit the website or open the Web.

Scope:

- Design and implement the home page with essential sections such as navigation, featured content, user login, and key links.
- Ensure that the home page is responsive and performs well across different devices and screen sizes.

Prerequisites:

1. The backend system should be configured to handle dynamic content (if needed) for the home page.
2. The frontend development environment must be set up to build and test the home page.

Acceptance Criteria:

1. Accessing the Home Page:

- **Given** a user visits the platform's URL,
- **When** they load the page,
- **Then** they should see the home page as the initial landing page with a clear layout and navigation elements.

2. Navigation Elements:

- **Given** the user is on the home page,
- **When** they look for navigation options,
- **Then** they should find a menu or navigation bar that includes links to key sections such as "Home," "About Us," "Services," "Contact," and any other relevant pages.

3. Call-to-Action Buttons:

- **Given** the user is on the home page,
- **When** they look for actions to take,
- **Then** they should find clearly visible action buttons such as "Sign Up," "Learn More," or "Get Started" that lead to relevant sections or forms.

4. Responsiveness:

- **Given** the user is accessing the home page on different devices (e.g., desktop, mobile),
- **When** they view the page,
- **Then** the page should display correctly and be fully functional across various screen sizes and resolutions.

5. Load Time and Performance:

- **Given** the user accesses the home page,
- **When** they load the page,
- **Then** the page should load within acceptable performance thresholds and provide a smooth user experience.

Application Management (DLR-3)

Description

Description: As a client, I want to be able to view a list of available laborers who can be hired for my job so that I can choose the most suitable Labor based on their skills, availability, and ratings. Scope: This feature will enable clients to see a list of laborers who are currently available for new jobs. The list will include essential information about each laborer, such as their skills, experience, ratings, and availability. Preconditions: 1. The client must have an active account and be logged in. 2. There must be laborers available for hire in the system. Prerequisite: Laborers must have their profiles updated with current availability and skills. Acceptance Criteria: 1. Client View List of Available Labors: Laborers must have their profiles updated with current availability and skills. Given the client should navigate to Labor Profile Page from Home page. When they access the section to view available laborers Then they should see a list of laborers who are marked as available 1. Client search for the labor: Given Client should click on search icon for fast search. When they filter or sort the list based on criteria such as skills, ratings, or location Then the list should be updated to reflect the selected filters or sort options. 1. Client view labor details: Given the client is viewing a laborer's profile When the client clicks on a laborer's profile to view more details Then the system should ensure that the information displayed is accurate and up-to-date.

Description

Client Hiring Laborer

Title: Client can view available labour profiles and hire laborers from them.

As a Client,
I want to view the profiles of available laborers and hire them for my job post,
So that I can find and secure the right laborer for my project efficiently.

Acceptance Criteria:

- 1. The client can browse a list of laborers associated with their job post.
- 2. The client can click on a laborer's profile to view their details, including skills, experience, and reviews.
- 3. The client has a "Hire Now" button available on the laborer's profile.
- 4. When the "Hire Now" button is clicked, a confirmation message is displayed, and a hire request is sent to the selected laborer.
- 5. The laborer receives a notification of the hire request

Client managment (DLR-34)

Description

Client Viewing Laborer Responses

Title: Client can view responses from laborers on their job post.

As a Client,

I want to see the responses from laborers who are interested in my job post,

So that I can evaluate their applications and make informed hiring decisions.

Acceptance Criteria:

- 1. The client can view a list of laborers who have responded to their job post.
- 2. The responses include details such as the laborer’s name, message, and application status (e.g., accepted, rejected).
- 3. The client can view the profiles of laborers who responded to assess their suitability.
- 4. The client can reply to the laborers' messages directly from the response view.

Labour Managment (DLR-35)

Description

Laborer Applying for Jobs

Title: Laborer can apply for jobs and see the status of their applications.

As a Laborer,
I want to apply for job posts from clients and check the status of my applications,
So that I can keep track of my job opportunities and follow up as needed.

Acceptance Criteria:

- 1. The laborer can browse job posts created by clients.
- 2. The laborer can click on a job post to view its details and an "Apply" button.
- 3. After applying, the laborer receives a confirmation message indicating their application was submitted successfully.
- 4. The laborer can view a list of all their job applications along with their current status (e.g., pending, accepted, rejected).
- 5. The laborer can withdraw their application if the status is still pending.

Labour Managment (DLR-35)

Description

Laborer Viewing Interested Clients

Title: Laborer can view interested clients on their job post.

As a Laborer,

I want to see which clients have shown interest in my job post,

So that I can understand my marketability and potentially reach out to them.

Acceptance Criteria:

1. The laborer can view a list of clients who have viewed or interacted with their job post.

2. Each interested client entry includes the client's name and any relevant messages or notes.

3. The laborer can send follow-up messages or inquiries to interested clients from this list.

4. The laborer can manage their job post visibility based on client interest.

27 Aug 2024		same	javascript
28 Aug 2024		done (python)	javascript
29 Aug 2024	Implemented frontend in project	did nothing	javascript(done)
30 Aug 2024	learning JavaScript	made the github repo	Started the project; set up the basic structure for the homepage using HTML.
31 Aug 2024	learning JavaScript	Started working on SQL table creation. Learned the basics of table structures and relationships.	Continued building the homepage; added navigation links and initial styling.
1 Sep 2024	Implemented frontend in project	Continued SQL table creation, focusing on primary keys and foreign keys for database normalization	Started working on the login page layout using HTML and CSS.
2 Sep 2024	learning JavaScript	Practiced SQL queries (SELECT, INSERT, UPDATE, DELETE) to manipulate data in tables.	Completed the login page design; added form validation using JavaScript.
3 Sep 2024	implemented user profile frontend	Set up XAMPP on my local machine for web development.	Started developing the signup page; designed the layout and initial styles.
4 Sep 2024	started implementing available labour frontend at client end	Explored PHP basics, including syntax and how to connect to a MySQL database using PHP.	Finished the signup page layout and validation.
5 Sep 2024	started implementing available labour frontend at client end	Continued learning PHP. Worked on creating simple scripts to interact with the SQL tables.	Began working on the menu.html page; structured the layout and navigation.
6 Sep 2024	started implementing available labour frontend at client end	Reviewed documentation for XAMPP and PHP	Completed the basic structure for the menu.html page, including categories.
7 Sep 2024		Implemented additional SQL queries and functions for better data management.	Finished styling the menu.html page; items are visually appealing and easy to navigate.
8 Sep 2024		Gained hands-on experience with Jira software.	Integrated JavaScript functionality for the menu items, allowing users to interact with them.
9 Sep 2024	implemented frontend at labour end	Continued learning about advanced PHP features,	Completed user testing on the homepage and login pages; gathered valuable feedback.
10 Sep 2024		Worked on integrating PHP with XAMPP	Made adjustments to the homepage and login page based on user feedback.
11 Sep 2024	implemented frontend at labour end	Finalized SQL table structures and relationships.	Finalized the signup page; ensured all validation is working correctly.
12 Sep 2024	learning JavaScript	Reviewed Jira software functionalities for better project tracking	Conducted user testing on the menu.html page; gathered feedback on design and usability.
13 Sep 2024	learning JavaScript	Updated project documentation with insights gained from using XAMPP	Made adjustments to the menu.html page; enhanced its usability and aesthetics.
14 Sep 2024	implemented frontend at labour end	Focused on refining SQL queries	Began implementing responsive design elements for the homepage and login page
15 Sep 2024		Focused on refining SQL queries	Finished the responsive design for the signup page; tested across devices
16 Sep 2024		Documented the process of setting up the local environment with XAMPP	: Conducted thorough testing of all pages; ensured everything works as expected.

26 Aug 2024	Express	
27 Aug 2024	EJS	Designed and implemented user sign-up -login page frontend.
28 Aug 2024	learn EJS	Created a database -backend logic for user authentication purposes
29 Aug 2024	Implementing Ejs	Connected sign-up page to the database using PHP.
30 Aug 2024	NA	
31 Aug 2024	NA	Developed functionality for laborers to create job posts
1 Sep 2024	creating labor profile card	Created functionality for clients to post jobs.
2 Sep 2024	creating Labor profile card	Linked laborer and client posts to the database.
3 Sep 2024	creating labor job card	
4 Sep 2024	creating labor job card	Displayed laborer posts on the client dashboard.
5 Sep 2024	push notifications	Displayed client posts on the laborer dashboard.
6 Sep 2024	push notifications	Implemented search functionality for laborer posts on client end.
7 Sep 2024	push notifications	Implemented search functionality for client posts on labours end
8 Sep 2024	javascript	Update and polish Frontend of Home Page from both Client and Labour end
9 Sep 2024	learning firebase notifications	Added filters to refine laborer search results.
10 Sep 2024	implementing firebase notifications	Added filters for laborers to find clients.
11 Sep 2024		Built profile view from laborer posts for clients.
12 Sep 2024		Built profile view from client posts for laborers and update database table with pending requirement
13 Sep 2024		Allowed laborers and client to view and manage their job posts
14 Sep 2024		Enabled clients to hire laborers directly from posts.
15 Sep 2024	NA	All required connection and database implementation
16 Sep 2024	NA	
17 Sep 2024	NA	Update logic and connection clients to hire laborers directly from posts
18 Sep 2024	MST 2	Enabled laborers to apply for jobs from posts.
19 Sep 2024	MST 2	Added pagination to job posts for better navigation.
20 Sep 2024	Learning PHP	Enabled users to delete their job posts easily. and Implemented backend logic for post deletion using PHP.
21 Sep 2024	PHP libraries	
22 Sep 2024	implementing client email verification through PHP	Created client view showing interested laborers and update frontend -backend logic for better performance
23 Sep 2024	email verification	Created laborer view showing interested clients.
24 Sep 2024	email verification	Test and Integrated all frontend and backend functionalities successfully
25 Sep 2024	creating pop up notifications	Optimized database connections and overall project overview about future functionality
26 Sep 2024	creating pop up notifications	
27 Sep 2024	creating pop up notifications	Test the system functionality and feature and find loopholes
28 Sep 2024	NA	Plan and Meeting about future updation and work with team
29 Sep 2024	updating login page and testing it	
30 Sep 2024	updating login page and testing it	Develop functionality for laborers to create and submit past work posts.
1 Oct 2024	NA	Implement rating feature for users to rate laborers' past work posts.
2 Oct 2024	NA	Create review system allowing contractors to leave feedback on posts.
3 Oct 2024	integrating pop up with code	
4 Oct 2024	integrating pop up with code	Enable laborers to view , ratings, and reviews on their posts.
5 Oct 2024	Testing	Allow laborers to easily access and review their previously posted work.
6 Oct 2024	Testing	
7 Oct 2024	NA	Test functionality of past work posting, rating, and review features.
8 Oct 2024	COMPLETING THE REMAINING TASKS	Ensure laborers can view interactions and feedback on past posts.
9 Oct 2024		Testing of application with variation and Optimize UI/UX .
10 Oct 2024		
11 Oct 2024		
12 Oct 2024		

Sprint 1 Review	Details
Sprint Goal	Complete User Registration and Profile Management functionality.
Completed Work	User Registration (6 story points), Create Profile (6 story points), Delete Profile (4 story points), Create Landing Page (8 story points)
Feedback	1. Smooth user registration flow. Suggest adding password validation. 2. Landing page is clean, but more visuals could help. 3. Overall, the sprint was executed successfully with timely feature completion.
Sprint 2 Review	Details
Sprint Goal	Implement job posting and management features, including Create, Post, and Delete functionality for job posts
Feedback	Suggestions were made to improve clarity of the frontend for job postings and simplify profile deletion
Sprint 3 Review	Details
Sprint Goal	Customer can search for labour and labour can search for work.
Feedback	search bar functionality should be added and also filter should be there.
Sprint 4 Review	Details
Sprint Goal	Customer can hire labour and rate him. Also labour can review his application.
Feedback	post should be removed when a labour is hired. Labour's information should be complete in his profile.
Sprint 5 Review	Details
Sprint Goal	Labour can view interested clients and can see status of their job applications.
Feedback	status of clients application should be changed after hiring and labour should choose for whom he wants to work.

Sprint Retrospective

Category	Details
Sprint Duration	2 Weeks
Sprint Goal	Implement labor profile creation, job posting functionality, and review system for labor.
What Went Well	- Labor profile creation feature was successfully developed and tested.
	- Job posting functionality integrated with database and fully operational.
	- Review system was well received in testing.
What Didn't Go Well	- Coordination issues between the front-end and back-end teams caused some code merge conflicts.
	- Limited time for testing due to late feature completion.
What Can Be Improved	- Improve communication and task handoff between teams working on related features.
	- Allocate dedicated sprint time for thorough testing
Action Items	Increase focus on writing tests to catch bugs earlier in the development process.
	Set aside dedicated time for sprint review and retrospectives to avoid rushed feedback loops.
Team Feedback	- Good collaboration early in the sprint, but communication dropped when working on complex integrations.
	- Appreciated clear documentation and guidelines for the new features.

Definition of Ready

Category	Details
Story Clarification	- User stories are clearly written and understood by the team - Acceptance criteria are defined.
Dependencies Resolved	- No unresolved dependencies exist.
Design Specifications	- Html and php for front end development are provided to the team.
Estimate Provided	- The team has estimated the story and it fits within the sprint capacity.
Acceptance Criteria	- All acceptance criteria (validations for user input) are documented.
Development Environment	- Development environments (database) are set up and accessible.
Data Availability	- Any necessary data (job postings) are available and accessible.

Definition of Done

Category	Details
Functionality Implemented	- The feature (labor profile creation) is fully implemented, and all functionalities work as intended.
Acceptance Criteria Met	- The user story meets all acceptance criteria (profile creation saves user data and uploads images).
Testing Completed	- All tests (unit, integration, and functional) are passed successfully without major bugs.
Code Review Passed	- Code has been reviewed and approved by team members.
No Critical Bugs	- All critical bugs have been fixed and verified.
Documentation Updated	- Relevant documentation is updated.
Client Review	- The product owner or client has reviewed and accepted the feature.
